How To Set Up Remote Control on Kealus iPA PIM Analyzer

2. Connection Options

2.1 iPA as an Access Point

Figure 57 Wi-Fi Connection Options (iPA hotspot)

1. This is a nice and easy configuration with the iPA in hotspot mode connecting to the Serial number as a network 192.168.0.1 in your browser and kaelusap as a default Wi-Fi password.
2. Easy to remember the same IP address and password every time just the serial number required to connect to the correct iPA.

Step By Step Instructions:

Turn on iPA. Select **Network** on menu. Turn on **Hot Spot**.

Select the customer-provided WiFi control device (PC, Android Tablet, iOS Tablet, Android Smart Pone, iOS Smart Phone)

Open **available WiFi networks** on the controlling device. Select iPA Serial Number (begins with TX or AN)

Use the following default WiFi password "**kaelusap**" to establish connection

The iPA and controlling device are now connected via WiFi.

Open the browser on controlling device (**Safari, Google**, etc). Type **in 192.168.0.1** into address and hit enter.

You now have remote control of the Kaelus iPA.
