

# M9484C VXG

Vector Signal Generator, 9 kHz to 54 GHz

This data sheet provides key features and specifications for the M9484C VXG vector signal generator.

## About the M9484C VXG Signal Generator

You're designing the next RF breakthrough and ensuring that your design delivers maximum throughput, robust links, and data handling capabilities. This introduces a new set of design and test challenges, including more bandwidths, frequency bands, and system complexity.

Keysight has created the ultimate VXG signal generator to take your designs to the widest bandwidths, highest frequencies, and multichannel applications. With this fully integrated, calibrated, and synchronized solution, you don't need to worry about the errors caused by additional connections and instruments. Through integration with PathWave Signal Generation software, create performance-optimized reference signals and reduce the time you spend on signal simulation.

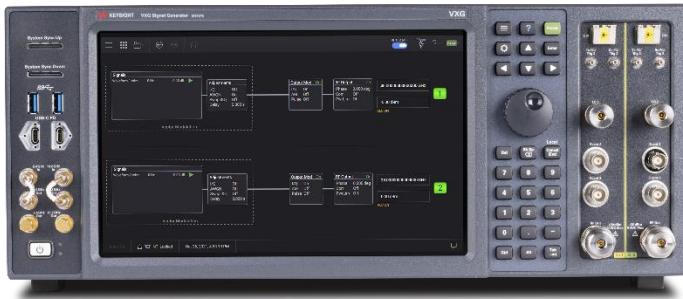

Figure 1. M9484C VXG Signal Generator with two 54 GHz channels.

### Generate complex test signals faster

Quickly generate the most demanding test signals for next-generation wireless communications and radar systems with ultimate performance and simple test setups.

## Definitions and Conditions

**Specifications** represent warranted performance of a calibrated instrument that has been stored for a minimum of 2 hours within the operating temperature of 0 to 50 °C, unless otherwise stated, and after a 45-minute warm-up period. The specifications include measurement uncertainty. Data represented in this document are specifications unless otherwise noted.

**Typical (typ)** describes additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 90 percent confidence level at room temperature (approximately 25 °C). Typical performance does not include measurement uncertainty.

**Nominal (nom)** values indicate the expected mean or average performance, or an attribute whose performance is by design, such as the 50-ohm connector. This data is not warranted and is measured at room temperature (approximately 25 °C).

**Measured (meas)** describes an attribute measured during the design phase for purposes of communicating expected performance, such as amplitude drift vs. time. This data is not warranted and is measured at room temperature (approximately 25 °C).

All of the above apply when using the instrument in its default settings unless otherwise stated.

## Frequency

| Frequency options                                    |                             |                     |
|--|-----------------------------|---------------------|
| Option   | CW Frequency Range          | RF output connector |
| M9484C-506   | 9 kHz to 6 GHz              | Type-N (f)          |
| M9484C-508   | 9 kHz to 8.5 GHz            | Type-N (f)          |
| M9484C-514   | 9 kHz to 14 GHz             | 3.5 mm (m)          |
| M9484C-520   | 9 kHz to 20 GHz             | 3.5 mm (m)          |
| M9484C-532   | 9 kHz to 31.8 GHz           | 1.85 mm (m)         |
| M9484C-544   | 9 kHz to 44 GHz             | 1.85 mm (m)         |
| M9484C-554   | 9 kHz to 54 GHz             | 1.85 mm (m)         |
| Frequency resolution                                 |                             |                     |
| CW   | 0.00001 Hz                  |                     |
| Phase adjustments                                    |                             |                     |
| Phase offset range                                   | ± 180°                      |                     |
| Phase offset resolution                              | 0.001°                      |                     |
| Relative phase adjustments (option PCH) <sup>1</sup> |                             |                     |
| Relative phase offset range                          | ± 180°                      |                     |
| Relative phase offset resolution                     | 0.001°                      |                     |
| Relative phase repeatability                         | 0.0001° (nom.) <sup>2</sup> |                     |
| Frequency switching speed <sup>3</sup>               |                             |                     |
| 10 MHz to 54 GHz                                     | 3.0 ms (meas.)              |                     |

<sup>1</sup> Channel 1 relative to channel 2, for example.

<sup>2</sup> When tuning frequency from f1 to f2 and back to f1.

<sup>3</sup> Time from receipt of SCPI command to frequency within 0.1 ppm of final frequency or within 100 Hz, whichever is greater, and amplitude within 1 dB of final amplitude.

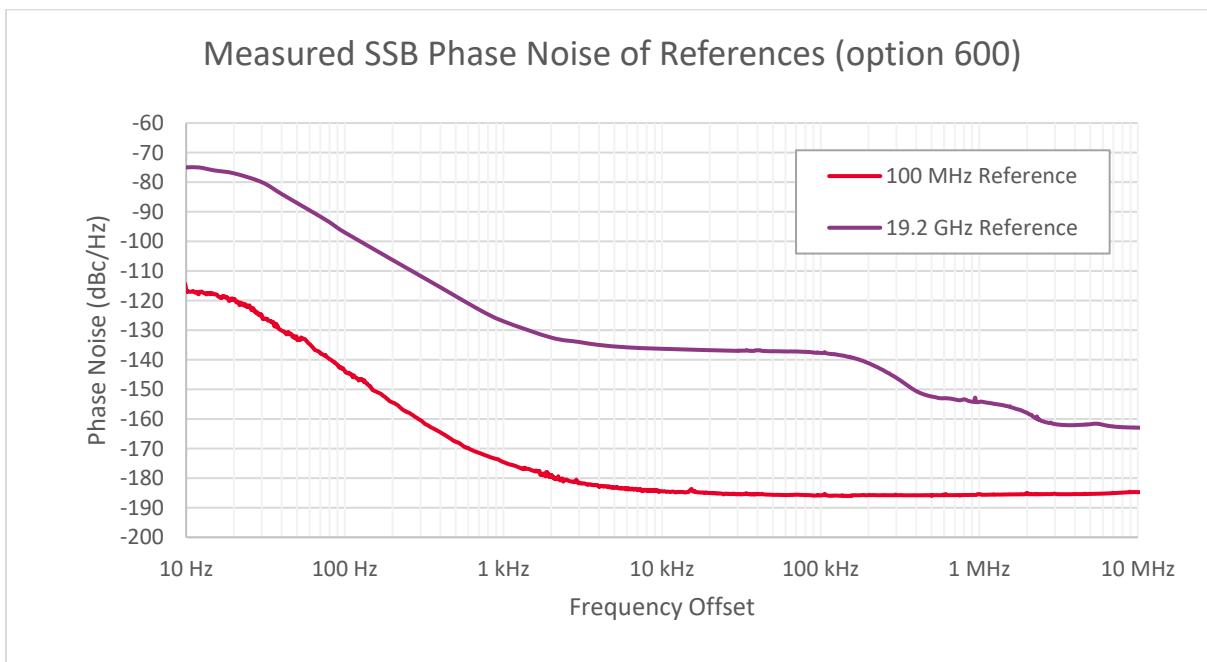

## Frequency Reference

| Frequency accuracy                                      |                        |   |
|---|------------------------|---|
| Calculation   |                        | $\pm$ (time since last adjustment x aging rate)               |
|   |                        | $\pm$ temperature effects                                     |
|   |                        | $\pm$ calibration accuracy                                    |
| Aging rate <sup>4</sup>                                 | First year             | 0.05 ppm/year, after 72-hour warm-up                          |
|   | Second year            | 0.03 ppm/year, after 72-hour warm-up                          |
| Temperature effects<br>(nom.)                           | 20 to 30 °C            | < $\pm$ 10 ppb  |
|   | Full temperature range | < $\pm$ 50 ppb  |
| Initial achievable calibration accuracy <sup>5</sup>    |                        | $\pm 5 \times 10^{-8}$  |
| Warm up (nom.)  |                        |   |
| 5 minutes over +20 to +30 °C, with respect to 1 hour    |                        | < $\pm$ 0.1 ppm   |
| 15 minutes over +20 to +30 °C, with respect to 1 hour   |                        | < $\pm$ 0.01 ppm  |
| External reference input                                |                        |   |
| Frequency   | Standard               | 10 MHz, 100 MHz   |
|   | Option 1ER             | 1 MHz to 110 MHz flexible reference                           |
| Input frequency setting resolution (1ER)                |                        | 0.1 Hz  |
| Wide locking range                                      |                        | $\pm$ 1.0 ppm (nom.), optimized for best phase stability      |
| Narrow locking range                                    |                        | $\pm$ 0.6 ppm (nom.), optimized for best close-in phase noise |
| Amplitude   |                        | -3 dBm to +20 dBm (nom.)                                      |
| Connector   |                        | BNC female  |
| Impedance   |                        | 50 Ω (nom.)   |
| External reference input PLL synchronization bandwidths |                        |   |
| External reference frequency                            |                        | Synchronization loop bandwidth                                |
|   |                        | Narrow  |
| 10 MHz  |                        | 0.015 Hz  |
| 100 MHz   |                        | 0.015 Hz  |
| Flexible Reference (1ER) 1 – 110 MHz                    |                        | 0.015 Hz  |
|   |                        | Wide  |
| 10 MHz  |                        | 70 Hz   |
| 100 MHz   |                        | 70 Hz   |
| Flexible Reference (1ER) 1 – 110 MHz                    |                        | 70 Hz   |

<sup>4</sup> Not verified by Keysight N7800A TME Calibration and Adjustment Software. Daily aging rate may be verified as a supplementary chargeable service, on request.

<sup>5</sup> At time of shipment.

| Reference outputs              |                                    |
|--------------------------------|------------------------------------|
| <b>10 MHz out</b>              |                                    |
| Amplitude <sup>6</sup>         | ≥ 5 dBm, 7 dBm (typ.), square wave |

| ALC on   | Power leveling with internal temperature stabilized detector feedback loop |                                |                            |
| ALC off  | Temperature compensated power control                                      |                                |                            |
| Auto   | Automatic selection of ALC on or off depending on instrument settings      |                                |                            |

<sup>10</sup> Harmonic filters not enabled (selectable with option 1EH). For CW operation; level range not valid when vector modulation is on.

<sup>11</sup> Time from receipt of SCPI command to amplitude within 1 dB of final amplitude. For frequencies  $\geq$  10 MHz.

<sup>12</sup> Power alignment is a routine that offsets initial ALC off factory calibration to be in line with local ambient temperature and provides sufficient range for ALC on leveling. It should be run at regular intervals or whenever the operating temperature changes more than  $\pm 5$  °C from the previous alignment temperature.

## Spectral Purity

| None   |   |                                      |

<sup>13</sup> Performance is unspecified for harmonics beyond the specified frequency range. CW signal enabled with vector modulation. Specifications may degrade when vector modulation is not used.

<sup>14</sup> Option 1EH cannot be combined with frequency options 506 or 508.

<sup>15</sup> Standard harmonic specification applies  $\leq$  +5 dBm between 7.25 GHz and 15 GHz. Standard harmonic specification applies  $\leq$  0 dBm between 21.6 GHz and 27 GHz. Option 1EH harmonic specification applies  $\leq$  0 dBm between 21.6 GHz and 27 GHz.

<sup>16</sup> Performance may degrade in enhanced SNR mode.

Absolute SSB phase noise (CW in enhanced SNR mode at +10 dBm) (dBc/Hz) (options ST6, 600),  
temperature range 22 to 28°C, () = typical

### Measured SSB Phase Noise (option ST6)

### Measured SSB Phase Noise (option ST5)

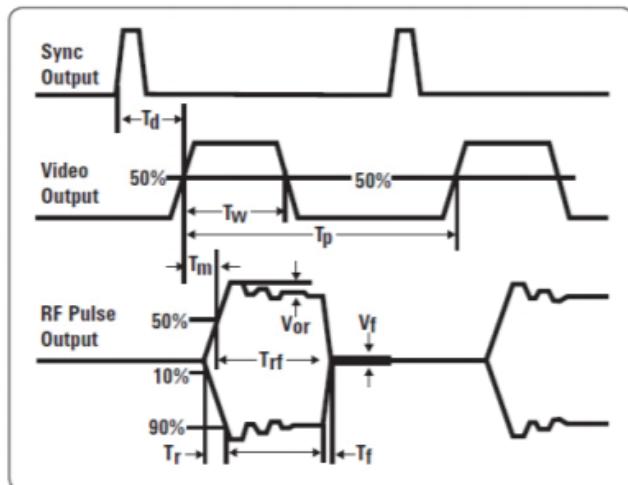

## Measured SSB Phase Noise with Modulation (option ST6)

## Pulse Modulation (Option PMR or PME)

| Pulse modulation <sup>17</sup> , temperature range 22 to 28°C, () = typ   |                        |                                |              |  |
|---|------------------------|--------------------------------|--------------|--|
| Pulse paths   |                        | Internal pulse generator       |              |  |
| Minimum pulse width ( $T_w$ ) with duty cycle $\leq 50\%$ , ALC on or off | Option PMR             | 20 ns                          |              |  |
|   |                        | 30 ns                          |              |  |
| On/off ratio <sup>18</sup>  |                        | 80 dB                          |              |  |
| Rise/fall times ( $T_r$ and $T_f$ ), ALC on or off                        |                        | 10 ns (6 ns)                   |              |  |
| Level accuracy relative to CW   | ALC state              | ALC on                         | ALC off      |  |
|   | 100 MHz to 20 GHz      | $\pm 0.6$ dB                   | $\pm 0.5$ dB |  |
|   | > 20 GHz to 45 GHz     | $\pm 1$ dB                     | $\pm 0.7$ dB |  |
|   | > 45 GHz to 54 GHz     | $\pm 1.5$ dB                   | $\pm 1$ dB   |  |
| Width compression   | 100 MHz to 45 GHz      | $\pm 2$ ns                     |              |  |
|   | > 45 GHz to 54 GHz     | $\pm 3$ ns                     |              |  |
| Video feed-through ( $V_f$ )  | 100 MHz to < 1 GHz     | < 50 mV p-p (< 25 mV p-p)      |              |  |
|   | $\geq 1$ GHz to 54 GHz | < 25 mV p-p (< 12 mV p-p)      |              |  |
| Pulse overshoot   | 100 MHz to 45 GHz      | < 10%                          |              |  |
|   | > 45 GHz to 54 GHz     | < 20%                          |              |  |
| External triggered input  |                        | No analog pulse inputs allowed |              |  |

- $T_d$  video delay (variable)
- $T_w$  video pulse width (variable)
- $T_p$  Pulse period (variable)
- $T_m$  RF delay
- $T_{rf}$  RF pulse width
- $T_f$  RF pulse fall time
- $T_r$  RF pulse rise time
- $V_{or}$  pulse overshoot
- $V_f$  video feedthrough

<sup>17</sup> Specifications apply for center frequencies > 100 MHz.

<sup>18</sup> On/off ratio excludes spurs.

## Internal Pulse Generator (Option PMR or PME)

| Internal pulse generator |   |   |
|--------------------------|---|---|
| Modes                    | Square, adjustable doublet                                      |   |
| Triggering               | Free run, triggered, gated                                      |   |
| Square wave rate         | (50 MHz)/k from 0.1 Hz to 16.66 MHz where k is an integer (nom) |   |
| Signal routing           | Pulse trigger input   | Trig 1- 3, Trig A-C, Trig D-O via aux connector |
|                          | Pulse video output  | Event 1   |
|                          | Pulse sync output   | Event 2   |
| Pulse period (PRI) (Tp)  | 60 ns to 41.99 s  |   |
| Pulse width (Tw)         | 30 ns to 41.99 s  |   |
| Video delay (Td)         | Free run  | 0 to 42s  |
|                          | Triggered modes   | 0 to 42s  |
| Sync output              | 30 ns to 3.99 s   |   |
| Pulse doublets           | Delay 1   | 0 to 42s  |
|                          | Pulse width 1   | 30 ns to 41.99 s                                |
|                          | Delay 2   | 60 ns to 42s                                    |
|                          | Pulse width 2   | 30 ns to 41.99s                                 |

## Vector Modulation (Options Bxx, Rxx)

| Internal I/Q baseband generator adjustments  |   |                           |
|--|---|---------------------------|
| Internal I and Q offset  | $\pm 20\%$ (0.1% resolution)                                |                           |
| Internal I/Q quadrature angle  | $\pm 20^\circ$ (0.001° resolution)                          |                           |
| Internal I/Q gain balance  | $\pm 10$ dB (0.001 dB resolution)                           |                           |
| Internal I/Q time skew   | $\pm 33.33$ ns (100 fs resolution)                          |                           |
| I/Q common delay range   | 0 to 16.667 ns  |                           |
| I/Q common delay resolution  | 100 fs  |                           |
| I/Q baseband output (option AN1 and DIQ)   |   |                           |
| Type   | Single ended (AN1), differential (DIQ)                      |                           |
| Output impedance   | Single ended  | 50 Ω (nom.)               |
|  | Differential  | 100 Ω (nom.)              |
| Frequency range  | DC to 1.2 GHz (nom.) for each output (2.4 GHz composite IQ) |                           |
| Common mode I/Q offset   | $\pm 1.5$ V (50 μV resolution) (meas.)                      |                           |
| Differential mode I or Q offset  | $\pm 1.5$ V (50 μV resolution) (meas.)                      |                           |
| Differential mode amplitude  | DC to 200 MHz   | 4 Vp-p (meas.) into 100 Ω |
|  | DC to 1.2 GHz   | 2 Vp-p (meas.) into 100 Ω |
| Internal real-time complex digital I/Q filters   |   |                           |
| Factory channel corrections – corrects the linear phase and amplitude response of the RF outputs of the signal generator using factory calibration arrays. |   |                           |
| Frequency response over available modulation bandwidth <sup>19</sup>   |   |                           |
| Center Frequency   | Amplitude   | Phase                     |
| 400 MHz to 21.6 GHz  | $\pm 0.25$ dB (meas.)                                       | $\pm 5^\circ$ (meas.)     |
| > 21.6 GHz to 35 GHz   | $\pm 0.25$ dB (meas.)                                       | $\pm 5^\circ$ (meas.)     |
| > 35 GHz to 54 GHz   | $\pm 0.5$ dB (meas.)  | $\pm 10^\circ$ (meas.)    |

<sup>19</sup> See **RF (I+Q) bandwidth table** for available modulation bandwidth.

## User defined automatic channel response correction and S-parameter de-embedding (N7653APPC)

### Methods for fixture error removal

Scatter parameters de-embedding/embedding files generated by a network analyzer or simulation

Automatic channel response correction using a power sensor or spectrum analyzer (amplitude and phase correction)

Scaler user flatness (absolute power correction)

### Scatter parameters

|  |            |
|--|------------|
| File format                            | .s2p, .csv |
| Number of cascadeable calibration sets | 4          |

### Automated channel response correction (512 taps)<sup>20</sup>

Recommended maximum amplitude for error correction  $\pm 5$  dB across modulation bandwidth

### User flatness

|             |                                       |
|-------------|---------------------------------------|
| File format | .uflat, .csv                          |
| Entry modes | USB or LAN direct power meter control |

### Instrument Nonlinear Correction (N7653APPC)

Improve the characteristics of the generated signal by digitally predistorting the waveform to reduce distortion components.

<sup>20</sup> Automated routine uses power sensor to correct for linear phase and amplitude response of DUT (equalizer). See User Documentation for more details.

## Internal Baseband Generator (options Bxx, Rxx)

| Definitions   |  |                    |                             |                    |
|---|--|--------------------|-----------------------------|--------------------|
| Channel or port   | The number of physical RF outputs  |                    |                             |                    |
| Signal <sup>21</sup>  | By default, each channel can generate one signal (ex: one waveform file). When option 8SG is included, each channel can generate up to 8 signals, which are summed and played out of the single RF output. |                    |                             |                    |
| Group   | A group can contain 1 to 8 signals assigned to a channel   |                    |                             |                    |
| Internal baseband generator (options Bxx, Rxx)                      |  |                    |                             |                    |
| Channels  | In phase (I), quadrature (Q)   |                    |                             |                    |
| DAC resolution  | 16 bits  |                    |                             |                    |
| Waveform granularity  | 1 sample   |                    |                             |                    |
| Frequency offset  | ± half of maximum baseband bandwidth   |                    |                             |                    |
| Signal attenuation  | 0 to -100 dB   |                    |                             |                    |
| Sample rate resolution  | 10 µHz   |                    |                             |                    |
| Interpolated DAC rate   | Fixed 3 GHz  |                    |                             |                    |
| RF (I + Q) bandwidth <sup>22</sup> and sample rate                  |  |                    |                             |                    |
| Option  | RF (I + Q) bandwidth (nom.)  | Sample Rate (nom.) |                             |                    |
| Option B1X  | 160 MHz  | 200 MSa/s          |                             |                    |
| Option B2X  | 250 MHz  | 300 MSa/s          |                             |                    |
| Option B5X  | 500 MHz  | 600 MSa/s          |                             |                    |
| Option R10  | 1 GHz  | 1.2 GS/s           |                             |                    |
| Option R25  | 2.5 GHz  | 3 GS/s             |                             |                    |
| RF (I + Q) bandwidth <sup>22</sup> and sample rate, limited options |  |                    |                             |                    |
| Option  | Option R1E   |                    | Option R2E                  |                    |
| Frequency   | RF (I + Q) bandwidth (nom.)  | Sample rate (nom.) | RF (I + Q) bandwidth (nom.) | Sample rate (nom.) |
| 10 MHz to < 5.75 GHz  | 1 GHz  | 1.2 GS/s           | 2.5 GHz                     | 3 GS/s             |
| 5.75 GHz to < 31.25 GHz   | 1 GHz  | 1.2 GS/s           | 2.2 GHz                     | 3 GS/s             |
| 31.25 GHz to < 31.85 GHz  | 1 GHz  | 1.2 GS/s           | 1 GHz                       | 3 GS/s             |
| 31.85 GHz to 36.96 GHz  | 550 MHz  | 1.2 GS/s           | 550 MHz                     | 3 GS/s             |
| > 36.95 GHz to 37.55 GHz  | 1 GHz  | 1.2 GS/s           | 1 GHz                       | 3 GS/s             |
| > 37.55 GHz to < 54 GHz   | 1 GHz  | 1.2 GS/s           | 2.2 GHz                     | 3 GS/s             |

<sup>21</sup> When AWGN or CW Interferer are enabled, option 8SG provides 7 signals.

<sup>22</sup> Lower edge of modulated signal is not recommended to extend below 10 MHz. Upper edge of modulated signal is not recommended to extend above 8.5 GHz (option 508), 21 GHz (option 520), or 54 GHz (option 554).

<sup>23</sup> Waveforms with fewer samples will be repeated or extended as selected.

<sup>24</sup> Sequence memory is shared with all signals on a channel. The consumption is non-uniform based on size of waveforms, trigger type, and nested sequences.

<sup>25</sup> Contact Keysight for sample rates ≤ 1.7 MSa/s

| Multi-channel baseband synchronization primary/secondary (option PCH)  |  |                                |
|--|--|--------------------------------|
| Global trigger coarse delay range  | 0 to 41 s  |                                |
| Global trigger coarse delay resolution   | 10 ns  |                                |
| Global trigger jitter  | $\pm 10$ ns (nom.) relative to asynchronous external system trigger event    |                                |
| Channel-to-channel relative trigger repeatability  | $< \pm 5$ ps (nom.)  |                                |
| Markers  |  |                                |
| Markers are defined in a segment during the waveform generation process. Markers can be routed to the external outputs. See User's Documentation for more information. |  |                                |
| Marker polarity  | Positive   |                                |
| Number of markers  | 4  |                                |
| Marker routing   | Event 1-3, Trig 1- 3, Trig A-C, Trig D-O via aux connector                   |                                |
| Marker to waveform jitter (event outputs)  | < 52 ps (nom.) (sample rate is a submultiple of 3 GHz)                       |                                |
|  | < 333 ps (nom.) (sample rate is not a submultiple of 3 GHz)                  |                                |
| Marker to waveform jitter (trigger outputs)  | < 1.67 ns (nom.)   |                                |
| Marker edge update rate  | 1.67 ns  |                                |
| Marker combining (option 8SG)  | Multiple markers can be combined on one output connector via an OR operation |                                |
| AWGN (option 403)  |  |                                |
| Type   | Real-time  |                                |
| Modes of operation <sup>26</sup>   | Standalone signal or digitally added to signals                              |                                |
| Bandwidth  | 1.6 Hz to maximum baseband bandwidth, 0.8 Hz resolution                      |                                |
| Crest factor   | Standalone signal  | -21.8 dB                       |
|  | Digitally added to signals   | -18.5 dB                       |
| Randomness   | Standalone signal  | 6 hours                        |
|  | Digitally added to signals   | 194 years at 2.5 GHz bandwidth |
| Carrier-to-noise ratio   | $\pm 100$ dB when added to signal  |                                |
| Carrier-to-noise ratio formats   | C/N, Eb/No   |                                |

<sup>26</sup> When AWGN is enabled, option 8SG provides 7 signals.

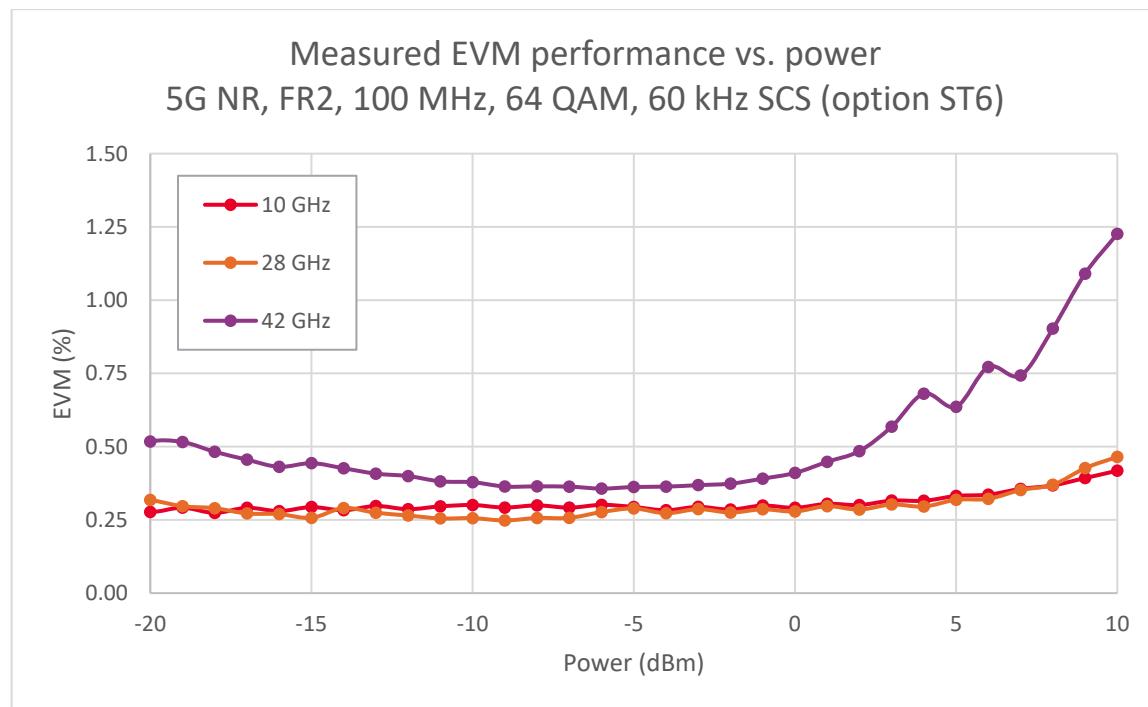

| CW interferer (option 403)                   |  |
|--|--|
| Type   | Real-time  |
| Modes of operation <sup>27</sup>             | Standalone signal or digitally added to signals    |
| Power control                                | Absolute, relative to signal power                 |
| Frequency offset                             | ± half of maximum baseband bandwidth <sup>28</sup> |
| Eight virtual signal generators (option 8SG) |  |
| Combined signal sample rate                  | ≤ 3 GSa/s  |
| Combined signal bandwidth                    | ≤ maximum baseband bandwidth <sup>28</sup>         |
| Individual signal sample rate                | ≤ maximum sample rate <sup>28</sup>                |
| Individual signal frequency offset           | ± half of maximum baseband bandwidth <sup>28</sup> |
| Individual signal attenuation                | 0 to -50 dB  |

<sup>27</sup> When CW interferer is enabled, option 8SG provides 7 signals.

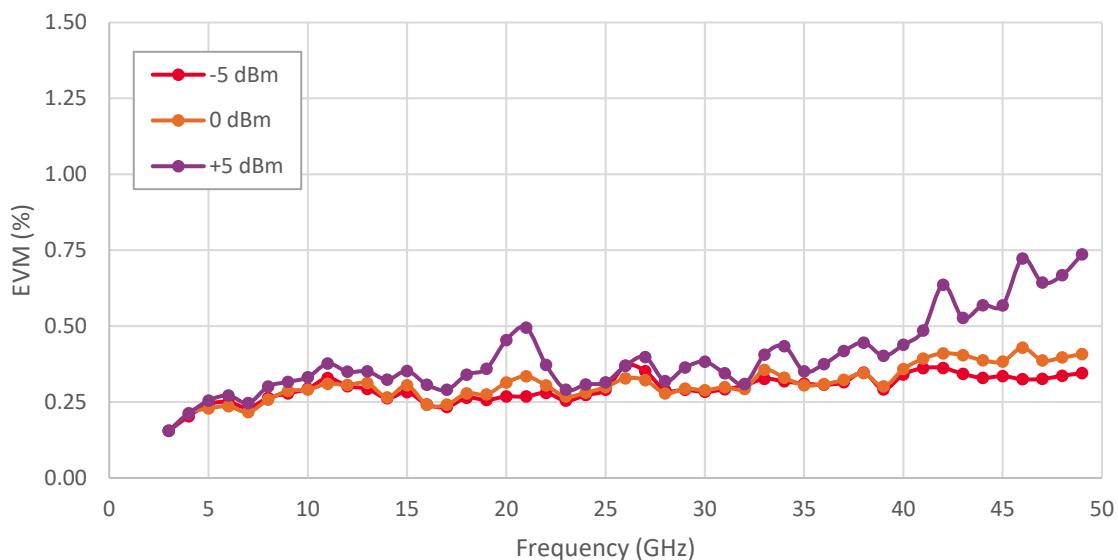

<sup>28</sup> For maximum baseband bandwidth and sample rate, see **RF (I+Q) bandwidth and sample rate**.

## Error Vector Magnitude (EVM)

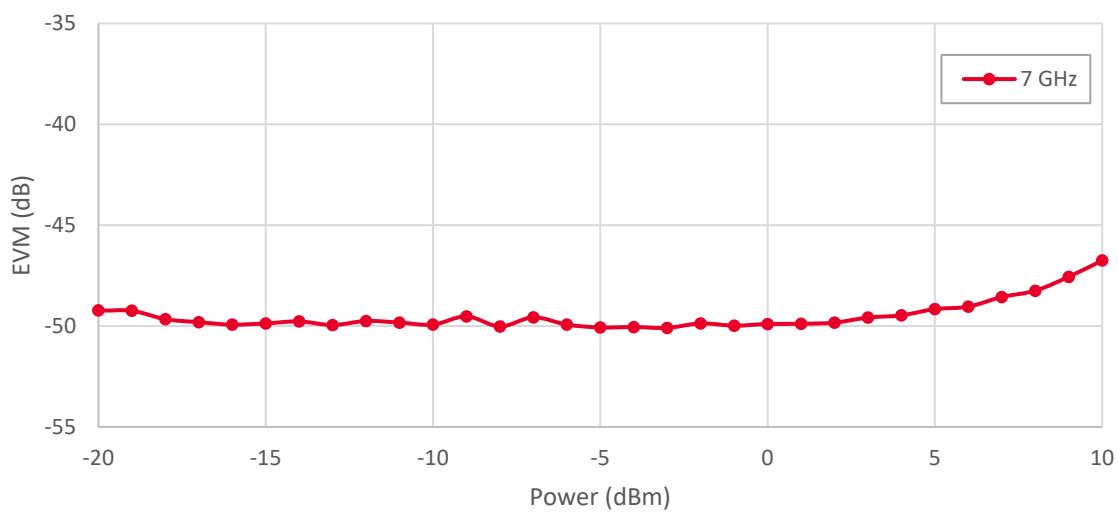

| EVM for 5G NR FR2 bands and IFs, -10 dBm to +5 dBm, option ST6 |  |  |
|--|--|--|
| Frequency  | 100 MHz, 256QAM, 120 kHz SCS,<br>NRB = 66 or 5GTF        | 400 MHz, 256QAM, 120 kHz SCS,<br>NRB = 264 |
| 10 GHz   | 0.35% (meas.)  | 0.63% (meas.)                              |
| 12 GHz   | 0.35% (meas.)  | 0.63% (meas.)                              |
| 24 GHz   | 0.35% (meas.)  | 0.63% (meas.)                              |
| 28 GHz   | 0.35% (meas.)  | 0.63% (meas.)                              |
| 39 GHz   | 0.40% (meas.)  | 0.71% (meas.)                              |
| 42 GHz   | 0.58% (meas.)  | 0.79% (meas.)                              |
| EVM for 5G NR FR1 bands, -10 dBm to +5 dBm, option ST6         |  |  |
| Frequency  | 100 MHz, 256QAM, 60 kHz SCS, NRB = 135                   |  |
| 2 GHz  | 0.17% (meas.)  |  |
| 4.5 GHz  | 0.21% (meas.)  |  |
| EVM for WLAN, -10 dBm to 0 dBm, option ST6                     |  |  |
| Frequency  | 802.11be, 320 MHz, MCS13, 300 µs, Ch Estimation Seq Only |  |
| 7 GHz  | -50 dB (meas.)   |  |

Measured EVM performance vs. frequency  
5G NR, FR2, 100 MHz, 64 QAM, 60 kHz SCS (option ST6)

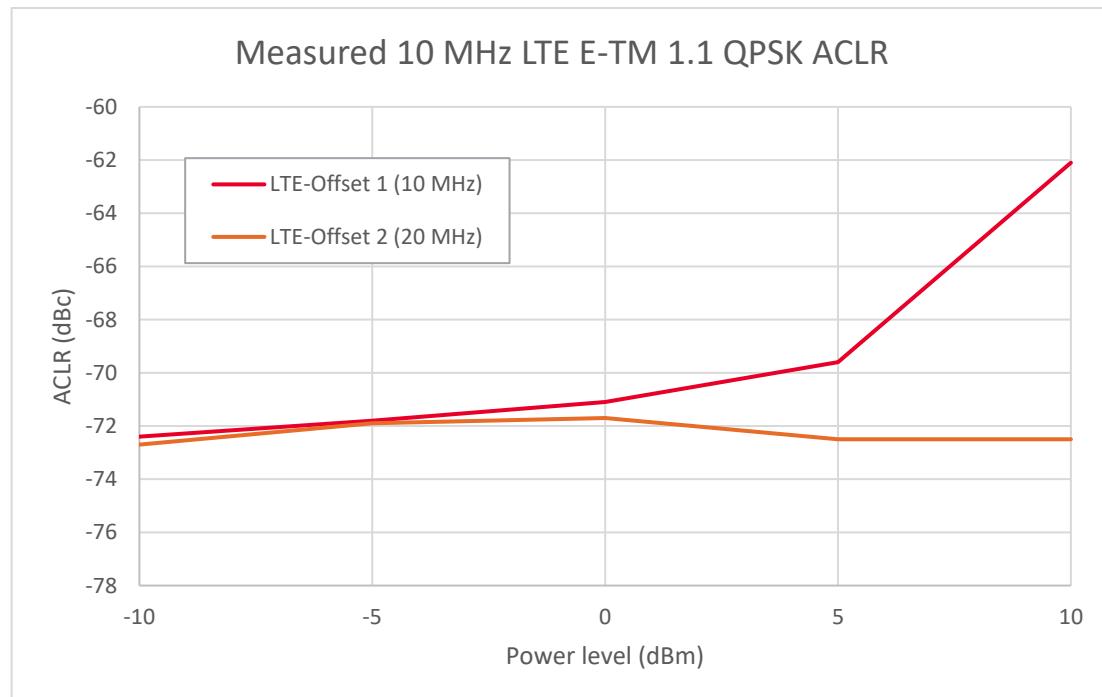

Measured EVM performance vs power  
WLAN 802.11be, 320 MHz, MCS13, 300  $\mu$ s,  
Ch Estimation Seq Only

## Distortion Performance (Adjacent Channel Power Ratio)

| 3GPP LTE-FDD distortion performance, -10 dBm to + 5 dBm <sup>29</sup> , () = typ      |  |   |   |   |
|---|--|---|---|---|
| 10 MHz E-TM 1.1 QPSK  |  |   |   |   |
| Frequency   | Offset <sup>30</sup>                         | Options 506, 508                              | Options 514, 520, 532, 544, 554                                 |   |
| 1800 to 2200 MHz  | Adjacent (10 MHz)                            | -64 dBc (-68 dBc)                             | -63 dBc (-67 dBc)   |   |
|   | Alternate (20 MHz)                           | -65 dBc (-68 dBc)                             | -63 dBc (-67 dBc)   |   |
| 5G NR FR1 bands distortion performance, -10 dBm to +5 dBm, options 506, 508, 514, 520 |  |   |   |   |
| Frequency   | 100 MHz, 256QAM, 120 kHz SCS, NRB = 135      |   |   |   |
| 3.4 GHz   | -56 dBc (meas.)                              |   |   |   |
| 5G NR FR2 bands and IFs distortion performance, -10 dBm to +5 dBm, options 514, 520   |  |   |   |   |
| Frequency   | 100 MHz, 256QAM,<br>120 kHz SCS,<br>NRB = 66 | 400 MHz, 256QAM,<br>120 kHz SCS,<br>NRB = 264 | 8cc x 100 MHz<br>(800 MHz), 256QAM,<br>120 kHz SCS,<br>NRB = 66 | 14cc x 100 MHz<br>(1.4 GHz), 256QAM,<br>60 kHz SCS,<br>NRB = 66 |
| 9 GHz to 14 GHz   | -53 dBc (meas.)                              | -48 dBc (meas.)                               | -47 dBc (meas.)   | -43 dBc (meas.)   |

<sup>29</sup> This is rms power. Convert from rms to peak envelope power with the following equation: PEP = rms power + crest factor (for example, 3GPP test model 1 with 64 DPCH has a crest factor 11.5 dB, therefore at +5 dBm rms, the PEP = 5 dBm + 11.5 dB = +16.5 dBm PEP).

<sup>30</sup> ACPR measurement configuration: reference channel integration BW: 9.015 MHz, offset channel integration bandwidth: 9.015 MHz.

## Remote Programming

| Remote programming    |  |
|-----------------------|--|
| Interfaces            | GPIB (IEEE-488.2,1987) with listen and talk, and 1000BaseT LAN interface   |
| Control languages     | SCPI version 1999.0  |
| IEEE-488 functions    | SH1, AH1, T6, TE0, L4, LE0, SR1, RL1, PP0, DC1, DT0, C0, E2  |
| Keysight IO libraries | Keysight's IO Library Suite helps you quickly establish an error-free connection between your PC and instruments – regardless of the vendor. It provides robust instrument control and works with the software development environment you choose. |

## General Specifications

| Environmental specifications and regulatory compliance (nom.) |           |   |
|---|-----------|---|
| Temperature   | Operating | 0 to 50 °C  |
|   | Storage   | -40 to +70 °C   |
| Type tested maximum relative humidity                         |           | 95% RH up to 40°C, decreases linearly to 57% RH at 50°C <sup>31</sup>   |
| Altitude  | Operating | 3,000 m (Up to 10,000 feet approx.)   |
|   | Storage   | 4,572 m (Up to 15,000 feet)   |
| EMC   |           | Complies with European EMC Directive<br>– IEC/EN 61326-1<br>– CISPR Pub 11 Group 1, class A<br>– AS/NZS CISPR 11<br>– ICES/NMB-001<br>This ISM device complies with Canadian ICES-001.<br>Cet appareil ISM est conforme à la norme NMB-001 du Canada.   |
|   |           | Samples of this product have been type tested in accordance with the Keysight Environmental Test Manual and verified to be robust against the environmental stresses of storage, transportation and end-use. Those stresses include but are not limited to temperature, humidity, shock, vibration, altitude and power-line conditions. Test methods are aligned with IEC 60068-2 and levels are similar to MIL-PRF-28800F Class 3. |
| Environmental testing   |           |   |

<sup>31</sup> From 40°C to 50°C, the maximum % relative humidity follows the line of constant dew point.

| Power requirements (nom.)       |  |  |                    |                     |  |  |  |
