Breakthrough Solutions for Real-time Digital Systems Analysis

The TLA700 Series offers a range of digitizing oscilloscope modules that provide the acquisition capabilities of the world's best digitizing oscilloscopes, tightly integrated with the TLA700 logic analyzers. The 2 and 4 channel digitizing oscilloscope modules available in the TLA700 Series offer sample rates of up to 5 GS/s and bandwidths of up to 1 GHz, with 15 Kb memory depth per channel at all times.

The digitizing oscilloscope modules offer precise time correlation and flexible cross-triggering with other installed modules. This enables you to see the quality of critical signals time-correlated with the digital signals represented by the logic analyzer modules.

These modules offer the triggering you expect from a Tektronix digital oscilloscope: Pulse Width, Runt, Glitch, Slew Rate, Logic Pattern, Setup-and-Hold Violation, Edge and Timeout.

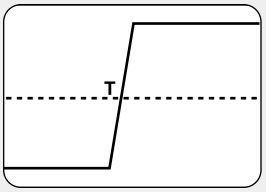
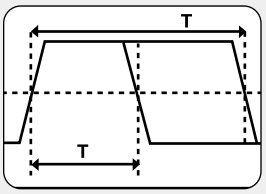
Trigger Types – Edge, pulse width, timeout, glitch, runt, slew rate, logic pattern, setup-and-hold violation.

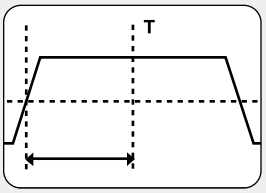
Setup-and-hold Trigger – Triggers on violations of both setup time and hold time between clock and data which are on separate input channels; setup time settable from –100 ns to +100 ns in 200 ps increments; hold time settable from –1 ns to +102 ns; minimum settable window of setup time + hold time is 2 ns.



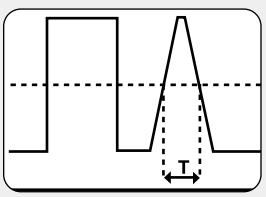
Trigger Actions – Trigger, trigger all, set signal, arm, immediate, wait for system trigger.



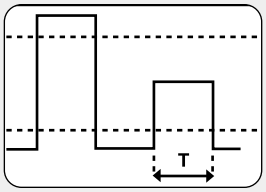
Edge Trigger – Conventional level driven trigger, positive or negative slope, on any channel or external trigger input. Coupling Selections: DC, AC, noise reject, HF reject, LF reject.



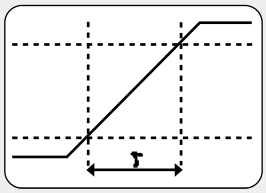
Pulse Width Trigger – Triggers on width of positive or negative pulse, either within or not within selectable time limits; settable from 2 ns to 1 s.



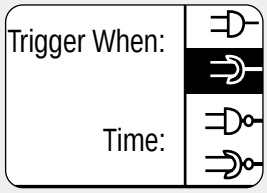
Timeout Trigger – Triggers when a pulse fails to complete when specified; settable from 2 ns to 1 s.



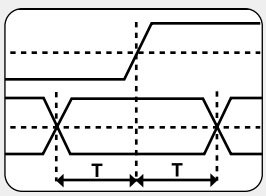
Glitch Trigger – Triggers on (or rejects) glitches of positive, negative, or either polarity; settable from 2 ns to 1 s. Minimum glitch width: 2.0 ns, with 200 ps resolution (2 ns to 10 ns settings).



Runt Pulse Trigger – Triggers on a pulse that crosses one threshold but fails to cross a second threshold before crossing the first again; settable from 2 ns to 1 s.



Slew Rate Trigger – Triggers on pulse edge rates that are either faster or slower than a set rate, edges can be rising, falling, or either; settable from 2 ns to 1 s.



Logic Pattern Trigger – Triggers when a logical combination (AND, OR) of all the input channels (Hi, Lo, Don't Care) stays true or false for a specified period of time; settable from 2 ns to 1 s.
